

SANKUR KUNDU

Machine Learning Engineer · Software Engineer · Data Scientist

Bhubaneswar, India · +91 97761 94201 · sankur.kundu.tw@gmail.com · [linkedin.com/in/sankur-kundu](https://www.linkedin.com/in/sankur-kundu) · github.com/Shakhtar-Sankur

Engineer who ships systems end to end. Co-founder and Director of Technology at Gigzen, where I built both products, the Postgres they share, and the public record of every test run against them — including the ones that found defects in my own finished work.

EXPERIENCE

Gigzen Private Limited · Co-founder & Director, Technology

Bhubaneswar | Apr 2026 – Present

- Co-founded an MCA-registered company targeting the **USD 582B gig economy**; own the engineering from schema to signed Android artefact.
- Run the production Postgres both products share — **17 tables under 48 row-level-security policies** — verified by attack: one authenticated driver reads 0 of another's messages and is refused (403) on writes.
- Sustained **30 concurrent simulated drivers across 18,372 API calls with zero failures**, all 13 methods, sessions refreshed mid-run, every account created and removed.
- Publish what failed: the engineering record names withdrawn claims and marks unreproducible numbers as not measured.

Freelance Data Scientist · Contract via Upwork

Remote, client in Spain | Jun 2026 – Present

- Engineer Python/Pandas/NumPy/SQL pipelines over multi-GB census, commercial and STATA .dta sources, turning unstructured records into analysis-ready datasets.
- Build validation and reproducibility checks with researchers and statisticians so results can be re-derived, not just reported.

PRODUCTS

Populace · Multi-user testing platform

npm: [@gigzen/populace](https://www.npmjs.com/package/@gigzen/populace) · [Shakhtar-Sankur/populace](https://github.com/Shakhtar-Sankur/populace)

- Simulated populations that drive a real app through its own API as authenticated users. Published to npm; **78 self-tests**, zero runtime dependencies, CI on Node 18 and 22.
- App-agnostic engine behind a **13-method adapter contract**; proven portable against a second, unrelated backend. Found **8 real defects** in a finished, manually tested app — five in the first three minutes.

Buzz · Gig-worker platform, Android

[Shakhtar-Sankur/buzz-buzz](https://github.com/Shakhtar-Sankur/buzz-buzz)

- React + TypeScript + Capacitor on Supabase: realtime feed, presence, read receipts, group chat, GPS tracking, offline-queued writes; a 7 MB signed release on Google Play's internal track.
- Localised into **16 languages at full parity** including right-to-left Arabic, with currency and platform list resolved from the user's region — 27 currencies, 49 countries.

SELECTED ML PROJECTS

- **ML Serving Platform** — versioned rollout, A/B routing and circuit breaking around inference; Triton, MLflow, Optuna, Prometheus.
- **Edge AI Model Compression** — distillation, pruning and int8 quantization to ONNX, targeted at TSMC 3nm constraints.
- **IoT Predictive Maintenance on GCP** — LSTM failure prediction on a 48-hour horizon with chronological splits; BigQuery, Vertex AI, Pub/Sub.
- **DETEK, Data-Leak Detection on AWS** — BERT content classifier paired with an LSTM behavioural model; Lambda, S3, EventBridge, CloudTrail.

SKILLS

Languages: Python, TypeScript, SQL, R, STATA

ML & AI: Production pipelines, training and evaluation, statistical modeling, deep learning (LSTM, BERT, DDPM), knowledge distillation, pruning, int8 quantization, ONNX, anomaly detection, LLM agent orchestration

Systems & Cloud: System design, distributed systems, CI/CD, GCP (BigQuery, Vertex AI, Pub/Sub), AWS (Lambda, S3, EventBridge), FastAPI, Node.js, React, Capacitor, Postgres + RLS, Redis, Docker, Kubernetes, Terraform

EDUCATION & CERTIFICATIONS

Institute of Engineering and Management, Kolkata · B.Tech, Computer Science & Engineering

2022 – 2026

Certifications: Meta Data Analyst; Google Data Analytics; Google Cybersecurity; IBM Cybersecurity Essentials
