SUMMARY

Software engineer (B.Tech CSE, 2026) and co-founder of Gigzen, with pull requests at **vLLM**, **PyTorch** and **Meta ExecuTorch** (one approved). I build systems and measure them against the best in the field: a fault-tolerant LLM cluster in C++/CUDA, a crash-safe streaming engine linking scams across **49** languages, a SQL database verified with TLA+, and CUDA screening of all **32,593** orbiting objects in **28 s**.

OPEN SOURCE

- vLLM **#60955** (under review): found its FlashInfer prefill tests compared non-causal attention with a causal reference; with my fix, **32 of 32** cases pass on a T4 and **all 32** fail if the bug returns.
- Meta ExecuTorch **#23677** (approved): fixed out-of-bounds reads in **2-bit/4-bit** embedding kernels for on-device LLMs.
- PyTorch **#199875**, **#199441**, **#199646** (under review): torch.compile determinism fix; **13** skips removed, **8** tests enabled.

PROJECTS

relay — C++, CUDA and Swift: a disaggregated, fault-tolerant LLM inference cluster

- Built C++/CUDA prefill and decode workers on custom flash-attention and flash-decoding kernels, a KV-cache transfer engine that streams each layer while the next computes, and a Swift control plane with prefix-aware routing.
- On a T4, cut 2,048-token prefill **8.7×** (3.7 s → 0.43 s) and batch-32 decode **5.4×**; streaming hides **99–100%** of the KV transfer. Output matches Hugging Face and stays bit-identical when batched, cached or split across workers.
- Fault-tolerant: watchdogs catch killed, frozen or stalled workers and their requests resume elsewhere with identical output (**384/384** through 60 kills; no request lost in **300** fault-injection seeds).

kessler — C++/CUDA and Python: an independent auditor of space traffic · live globe

- Built SGP4 and all-vs-all conjunction screening in C++/CUDA: all **32,593** tracked objects, every pair, a day ahead in **28 s** on a T4; matches CelesTrak SOCRATES to **0.24 m** and NASA CARA to **1.6e-8**; maneuver detection validated on debris.

quorumdb — Rust, zero dependencies: a distributed SQL database, PostgreSQL wire-compatible

- Built a distributed SQL database that psql connects to: LSM storage, Raft and self-rebalancing multi-Raft, serializable ACID transactions (Percolator) and a SQL planner; **1,500 tpmC** on a TPC-C-derived benchmark.
- Verified by deterministic simulation (**10,000** Raft clusters, 610K crashes, histories machine-checked) and a TLA+ model (337K states): found **6 real bugs** and catches all 15 planted ones.

babelguard — Python: an open early-warning system for scams that cross languages (in progress)

- Measured **33,869** scam SMS in **49** languages (South Asian **0.8%**, African **0.1%**); linking by meaning finds **85%** of cross-language matches (text: **1.5%**); a crash-safe engine runs **786 msgs/s** per core at **1M** synthetic messages (F1 **0.995**).

lipi — Python and PyTorch: cutting the token tax on Indian languages

- Measured 24 Indian languages on 15 production tokenizers and extended Qwen 2.5's (**released on Hugging Face**): fewer tokens than **GPT-4o's and Gemini's** in **23 of 24** languages; trained into Qwen2.5-0.5B on 2× T4 (DDP, ZeRO-1), Odia trains **5.4× faster**.

Additional projects

- **ratchet**: GRPO from scratch, GSM8K **48.1% → 52.5%**; **crucible**: sandboxed agent RL, MBPP **+3.7 points** (p = 0.013).
- **tessel**: GEMM at **cuBLAS parity**, LLM engine **1.05×** vLLM; **kiln**: beats **torch.compile, ONNX Runtime, XLA** on CPU.
- **switchyard**: MoE serving across 2 GPUs, **2.2×** Hugging Face; **tandem**: distributed training **bit-identical** to PyTorch.

EXPERIENCE

Gigzen — Co-founder & Founding Engineer **Apr 2026 – Present**

Early-stage startup (incorporation in progress) · Sole engineer across every product

- Sole engineer on **Waggle**, three Android apps on Supabase PostgreSQL: **53 tables, 90 RLS policies, 154 SQL functions**.
- Put first-accept-wins dispatch, UPI reconciliation and GST billing in the database, where no client can bypass them.
- Security-tested it with **150 automated attacks** on its database access rules (**all blocked**) and a 42-step Playwright run.
- Built **Populace**, an open-source testing tool on **npm** (**1,600+ downloads**) whose first run found **5 bugs** manual QA missed.

SKILLS

Languages: C++, Rust, Python, Swift (C++ interop), TypeScript, JavaScript, SQL (PL/pgSQL), Java
Backend, Web & Mobile: PostgreSQL, Supabase, RLS, pg_cron, REST, Node.js, FastAPI, Redis, React, Capacitor (Android)
Systems & performance: CUDA (tensor cores), LLM serving, MoE expert parallelism, RL post-training, DDP/ZeRO, SIMD
Testing, DevOps & Cloud: Simulation testing, fault injection, TLA+, Playwright, GitHub Actions, Docker, Kubernetes, GCP

EDUCATION

B.Tech, Computer Science and Engineering (AI & ML) — IEM Kolkata **Sep 2022 – Apr 2026**
